

## Improving the Quality of Life with real-time data

*We all know that it is more effective to prevent problems, than to fix them after they occur.*  
– Robert Åström, CEO –

Since Raisoft's beginning, our goal has been the same: To Improve the Quality of Life by providing the information needed to give the right treatment for the right person at the right time. We make the most out of the data gathered with interRAI assessment tools using our RAIsoft.net solution – in all levels of care. An individual's strengths, weaknesses, possibilities, and needs are always the center of focus.

And let's not forget the fact that this approach – without a doubt – is the best way to highest savings. Being a step ahead gives a great chance to prepare, prevent, and improve before things turn for the worse.

We strongly believe in deep co-operation and global networking. It is so inspiring and rewarding to gain new perspectives and learn new ideas from professionals all over the world.

Therefore – we do not hesitate to take new steps. In France we co-operate with The Research Center of the Maison Médicale Jeanne Garnier in a 3-year research project PADI PALLI. The project utilizes RAIsoft.net to collect and analyse interRAI PC (Palliative Care) assessments and other customized tools requested by the project. Padi Palli develops early palliative approach in long-term care for the elderly.

In Switzerland Raisoft has been a superior market leader for over 15 years. More than 650 nursing homes use our software solution to provide interRAI LTC assessments (Long-term Care) for their residents. Our work in Switzerland has begun in German speaking cantons, but over the last years Raisoft has won two large tenders in French speaking cantons (Vaud, Geneva) and provided them with software solutions for the whole interRAI suite.

In Finland, the data gathered by RAIsoft.net is used more and more to recognize different customer segments in order to provide them with even more personalized services – such as using RAIsoft.net data to support older people's cultural rights or find customers that would benefit the most from different digital services.

The amount of data gathered by interRAI assessments using RAIsoft.net software is so vast we are sure to claim that only the sky and imagination are the limit when wondering the ways to use the data...

### **Oy Raisoft Ltd** For People. By People.

- Software and Consultancy Service since 2000.
- Global company with customers and co-operation around the world.
- Multilingual capacity of Software - currently 9 different languages.
